

Working scientifically Year 2

Comparing plant growth in different conditions

What do you notice about the plants? Can you see any differences?

Why might the plants look different?

What similarities are there between the plants?

How can we observe the differences over time?

To look at things closely
To notice similarities and differences
To measure the height of plants
To compare the height of plants
To record observations using photos and drawings
To record measurements in a table

What does a plant need to grow?

Have our results answered our question? Why?

What will we record?
