

## Working scientifically Year 2

How can we accurately measure a handspan?

Who has the biggest/smallest hand span?

What hand size do most children have?

What do you notice about the children with the biggest hand span?

What equipment might we need to measure hand spans?

To make and record observations

To make comparisons

To take and record simple measurements

To use our observations to answer our questions

Can we use our observations to answer our questions?

Did the size of hands affect how many cubes they could pick up?
