

Working scientifically Year 3

Which bones in your body can most easily be measured?

Where are these bones in our bodies?

Can we use these ideas to create a question that we can investigate?

What piece of equipment would we use to measure them?

Ask relevant questions
Suggest a way to find the answer
Set up a simple practical enquiry
Take and record accurate measurements
Present information using simple charts and diagrams
Use their evidence to answer questions

Will our results help us to answer the question?

How will we record our data?

What unit of measure will we need to use to be most accurate?
