

# Working scientifically Year 4 Electricity

Which objects will complete the circuit?

Does that make them conductors or insulators?

Which things conduct electricity? What materials are they made from?

Which materials did not conduct electricity? What materials were they made from?

Which objects could be used to repair the circuit? Why?

To make predictions  
To carry out a simple test  
To make observations and record results  
To make suggestions based on evidence  
To answer questions based on what they have found out  
To present their findings including an explanation based on their findings

Can you explain your choices?

Can you think of anything else that might/might not conduct electricity?
