

Working scientifically Year 6

What is a fossil and how was it made?

(The rock has filled the gap where the animal was rather than it being the remains of an animal)

What do you think the animal looked like? How can you tell?

What do you think it ate? How can you tell?

Where do you think it lived? How can you tell?

To ask questions and re-search to find evidence to come up with answers

To identify scientific evidence that has been used to support or refute ideas

To separate opinion from fact

To report and present findings from enquiries

Which of your ideas are fact, backed by real evidence and which are opinion?

If the creature looked like that, what fossil could be left behind?
